PIM — IT security brief

PIM is a free Pinnpoint configurator that prints the A5 Print & Ship label from the label PDFs your WMS, ERP or shipping system already saves. This page answers the questions IT asks before approving it.

AT A GLANCE

Your WMS or ERP	PIM never connects to, reads or changes your WMS or ERP. It picks up the label PDFs your system already makes.
Network connections	Only to your printer on the local network, plus a daily HTTPS check of pinnpt.com/pim/version.json for a newer version. Nothing is sent.
Data leaving the PC	None. Nothing goes to Pinnpoint or anyone else.
Files PIM reads and stores	Reads only PDFs in the label and packing-list folders you set. Keeps everything in the PIM folder (C:\PIM): settings, merged sheets, archive and log.
Admin rights	Only to install PIM for all users. Never to run it.
Installer and code signing	Awaiting confirmation from the PIM developer
Operating systems	Windows, 64-bit (x64).
Deployment	One settings file (PIM.ini) can be copied to every PC. Silent install: PIM-Setup.exe /S /allusers (admin) or /S /currentuser. Intune: Windows app (Win32).
Download integrity	Compare the file with the SHA-256 checksum published on the PIM download page.
Cost	Free. No licence fee and no subscription. The download is one click, with no form.
Support and security updates	Free of charge, with no end date.
Licence	PIM End-User Licence Agreement, governed by Swedish law — pinnpt.com/pim-licence.html
Security contact	sales@pinnpt.com, subject “Security” · pinnpt.com/.well-known/security.txt

DATA FLOW

No connection between PIM and your WMS or ERP. PIM only reads the PDF files in the folder you choose.
